Pulse — Client Relationship Review Engine

ProessionalKey · MFD Suite · Vikuna Technologies

Version	1.0 — Initial
Status	Draft — Internal Review
Author	Charan · Vikuna Technologies
Date	April 2025
Product	ProessionalKey
Feature	Pulse · Pulse Queue

This document defines the Pulse feature — the structured, recurring client relationship review engine within ProessionalKey. It covers product context, user stories, UX flow, data model, acceptance criteria, and go-to-market considerations.

1. Overview

1.1 What is Pulse?

Pulse is ProessionalKey's structured, recurring client engagement cycle. It replaces ad-hoc "check-in" calls with a disciplined, data-driven relationship review that every MFD runs for every active client — on a defined schedule, with VaNi-prepared intelligence, and with outcomes tracked.

The Pulse in one sentence:

A Pulse is a scheduled meeting between an MFD and a client, supported before the meeting by VaNi-generated intelligence, captured during the meeting with structured notes, and closed after the meeting with confirmed actions — automatically scheduling the next cycle.

1.2 Why Pulse Exists

MFDs lose clients not because of bad products — but because of silence. Months pass, life events happen, financial situations change, and the MFD is unaware. By the time they reach out, the client has already moved. Pulse solves this.

Without Pulse	With Pulse
Ad-hoc calls, no structure	Scheduled cadence per client
MFD arrives unprepared	VaNi brief ready 48h before
No record of what was discussed	Notes + actions captured in-session
Gaps go unnoticed until crisis	Gaps flagged before the meeting
Next meeting date undefined	Auto-scheduled via JTD on close
Report generation is manual	Pulse report auto-generated

1.3 Who Uses Pulse

User	Role in Pulse
MFD (Rajesh)	Primary actor — owns all Pulse activity
Client (Meera)	Passive — receives reports, completes actions assigned to them
VaNi	Intelligence collaborator — prepares brief, flags gaps, structures notes
JTD Scheduler	Linked system — creates appointments, auto-schedules next Pulse

2. Product Goals & Success Metrics

2.1 Goals

- Every active client has a Pulse scheduled at the right frequency — no client is forgotten
- MFDs walk into every meeting prepared — VaNi brief removes the 30-min prep scramble
- Every Pulse produces a record — notes, actions, gaps status, next date
- Pulse completion rate becomes a practice health metric — visible on the MFD dashboard
- The Pulse report becomes the primary client communication artefact — replacing ad-hoc emails

2.2 Success Metrics

Metric	Target (6 months post-launch)
Pulse setup rate	80% of active clients have a Pulse configured
Pulse completion rate	70% of scheduled Pulses completed on time
Avg prep time saved	< 10 min per Pulse (vs 30+ min baseline)
Actions raised per Pulse	>= 1 tracked action per completed Pulse
Action closure rate	>= 75% of Pulse-raised actions closed within 30 days
Report generation rate	>= 60% of completed Pulses generate a client report
MFD retention (Pulse users)	>= 15% higher than non-Pulse users at 6 months

3. User Stories

3.1 MFD Stories

Setup

- As an MFD, I want to set a recurring Pulse frequency per client (monthly, bimonthly, quarterly, custom) so each client gets the right level of attention.
- As an MFD, I want to link a Pulse to JTD so an appointment is automatically created and the next cycle is auto-scheduled on completion.
- As an MFD, I want to choose a report template per Pulse type (Full Review / Quick Check-in / Annual / Gap Follow-up) so the brief and output match the meeting intent.

Preparation (Pulse Enabler)

- As an MFD, I want VaNi to auto-generate a pre-meeting brief — snapshot summary, changes since last Pulse, gaps, suggested agenda — so I am prepared without manual research.
- As an MFD, I want to review VaNi's observations and confirm, dismiss, or add context to each one before the meeting, so only validated insights carry into the record.
- As an MFD, I want a suggested agenda with time allocations so I can run the meeting efficiently.

In-Meeting

- As an MFD, I want a live session view with a running timer, freeform notes field, and agenda checklist so I can capture everything without switching tools.
- As an MFD, I want to quickly capture actions during the meeting (type + Enter) so no follow-up is missed.
- As an MFD, I want a quick-reference panel showing key client metrics (protection ratio, term gap, AUM) visible during the meeting.

Post-Meeting

- As an MFD, I want VaNi to auto-structure my freeform notes into a readable summary so I don't have to clean up meeting notes manually.
- As an MFD, I want to review and confirm all actions raised, with owner (MFD / client) and due date, before closing the Pulse.
- As an MFD, I want the next Pulse to be automatically scheduled via JTD when I close the current one.
- As an MFD, I want to generate a client-facing report (PDF / WhatsApp / Email) directly from the Pulse record with one click.

Pulse Queue

- As an MFD, I want to see all clients' Pulse statuses in a single queue — overdue, due soon, upcoming, completed — so nothing falls through.
- As an MFD, I want to filter the queue by frequency, status, and urgency so I can prioritise my week.
- As an MFD, I want summary stats (overdue count, completion rate, average duration) visible on the queue so I can track my practice health.

3.2 Client Stories (Indirect — no client app)

- As a client, I want to receive a clear, readable summary of what was discussed and what I need to do after each meeting, via WhatsApp or email.
- As a client, I want my action items to be clearly listed with due dates so I know exactly what is expected of me.
- As a client, I want periodic financial health updates (monthly / quarterly) even in months without a full Pulse meeting.

4. UX Flow — 6 Views

The Pulse feature comprises 6 navigable views, accessible from the Pulses section in the sidebar and from any client's Pulses tab.

UX View	Actor	Entry Trigger	Exit / Outcome
Pulse Queue	MFD	Sidebar → Pulses	Select a client to set up or prepare
Pulse Setup	MFD	New Pulse or overdue item	Frequency, template, JTD config saved
Pulse Prep	MFD + VaNi	48h before meeting / manual trigger	Brief confirmed → Enter Meeting
In Meeting	MFD	Start Meeting button	Notes + actions captured → End & Summarise
Post Meeting	MFD + VaNi	End meeting	Summary confirmed → Pulse closed + next scheduled
Pulse History	MFD	Client 360 → Pulses tab	Full timeline of past Pulses for the client

4.1 View Detail — Pulse Queue

- Summary strip: Overdue / Due This Week / Upcoming / Completed (YTD)
- Client list with left-border colour coding: red = overdue, amber = due soon, grey = upcoming, faded = completed
- Per-client: avatar, name, last Pulse date, frequency badge, JTD link status
- Per-client action: Prepare Pulse / Schedule / View Notes
- Filter pills: All / Overdue / This Week / Monthly / Bimonthly / Quarterly

4.2 View Detail — Pulse Setup

- Client identity card at top with current status
- Frequency selector: Monthly / Bimonthly / Quarterly / Custom (days input)
- Report template picker: Full Review / Quick Check-in / Annual Review / Gap Follow-up
- JTD link panel: auto-schedule toggle, preferred day, preferred time, meeting medium (Phone / Google Meet / In Person / WhatsApp)
- VaNi prep options: auto-generate brief toggle, include gap analysis toggle, send client reminder 24h before toggle

4.3 View Detail — Pulse Prep (Pulse Enabler)

- VaNi banner: summary of key observations since last Pulse, meeting duration estimate
- Snapshot summary: current financial metrics vs last Pulse (delta view)
- VaNi-identified gaps: each gap with severity chip (Critical / High / Medium)
- Suggested agenda: topics with time allocations, each checkable
- Collaborate actions per observation: Confirm / Add Context / Ask VaNi to dig deeper / Dismiss

- Prep complete bar: meeting time, medium, JTD link, Enter Meeting / Start Meeting buttons

4.4 View Detail — In Meeting

- Live session header: animated status dot, client name, meeting medium, running timer
- Freeform notes textarea: auto-saved, placeholder guidance, monospaced feel
- Quick action capture: type + Enter or Add button, captured actions list below
- Agenda checklist sidebar: tick off topics as covered
- Quick reference panel: key metrics (protection ratio, term gap, AUM, EMI/income)
- End & Summarise button: closes session, triggers VaNi summary generation

4.5 View Detail — Post Meeting

- VaNi-structured summary: auto-generated from freeform notes, editable
- Meeting stats: duration, topics covered, actions raised, gaps addressed
- Actions list: each with owner (RC badge / client badge), due date, status chip
- Gaps status update: each original gap updated to In Progress / Addressed / Carried
- Next Pulse card: auto-scheduled date via JTD, adjust option
- Close Pulse button: confirms record, triggers report generation option

4.6 View Detail — Pulse History

- Client-level stats: total Pulses, completed, missed, average duration, action closure rate
- Timeline: each Pulse as a card — date, type, duration, summary, actions (with done/open status)
- Each card expandable to show full notes and actions
- Missed Pulses shown with amber indicator and reason if captured

5. Data Model

5.1 Core Entities

Entity	Description
ki_pulse_config	Per-client Pulse configuration: frequency, template, JTD link, VaNi prep flags
ki_pulses	Each Pulse instance: client_id, scheduled_date, status, duration, medium
ki_pulse_notes	Freeform notes captured during meeting, linked to pulse_id
ki_pulse_summary	VaNi-generated structured summary, linked to pulse_id
ki_pulse_actions	Actions raised: text, owner_type (mfd/client), due_date, status, pulse_id
ki_pulse_gaps	Gap status per Pulse: gap_type, status (open/in-progress/addressed/carried), pulse_id
ki_pulse_observations	VaNi signals per Pulse prep: text, category, confirmed (bool), dismissed (bool)

5.2 Key Fields — ki_pulses

Field	Type / Notes
id	UUID · Primary key
tenant_id	UUID · Multi-tenant
contact_id	UUID → ki_contacts
config_id	UUID → ki_pulse_config
scheduled_date	TIMESTAMPTZ
completed_at	TIMESTAMPTZ · Null until closed
status	ENUM: scheduled / prep_ready / in_progress / completed / missed / cancelled
duration_minutes	INT · Captured on close
medium	ENUM: phone / google_meet / in_person / whatsapp
template	ENUM: full_review / quick_checkin / annual_review / gap_followup
jtd_appointment_id	VARCHAR · External JTD reference
report_generated	BOOLEAN · Default false
next_pulse_id	UUID → ki_pulses · Auto-set on close

5.3 Pulse Status Lifecycle

Status Flow:

scheduled → prep_ready (48h before, VaNi brief generated) → in_progress (MFD starts meeting)
→ completed (closed with notes) / missed (not conducted by due date + 3 days)

6. VaNi Integration — Pulse Enabler

6.1 Collaboration Model

VaNi does not act autonomously in Pulse. Every VaNi output is a draft signal that requires MFD collaboration before it is recorded. This keeps the MFD as the expert and VaNi as the intelligence layer.

VaNi Output	MFD Action Required
Pre-meeting brief observations	Confirm / Add Context / Dismiss each
Suggested agenda with time estimates	Edit, reorder, check off during meeting
Post-meeting structured summary	Review, edit, approve before saving
Risk flags and gap signals	Confirm Flag / Add Context / Ask VaNi / Dismiss
Goal probability calculations	Review assumptions, override if needed

6.2 VaNi Prep Brief — What It Generates

- Client snapshot delta: what changed since last Pulse (new loans, new goals, snapshot updates)
- Protection gap analysis: current vs recommended, changes in HLV
- Goal probability update: re-calculated based on current corpus and SIP
- Risk flags: macro signals + portfolio-specific signals (concentration, EMI ratio, illiquidity)
- Suggested agenda: ordered topics with estimated time, driven by gaps + context
- Meeting duration estimate: based on number of open items

6.3 Confirmed vs Draft Signals

Stamp convention:

A VaNi signal confirmed by the MFD receives a 'RC + VaNi' stamp with date. Only confirmed signals appear in the Pulse report sent to the client. Dismissed signals are archived but visible in the audit trail.

7. Report Generator

7.1 Report Types

Report Type	Description
Pulse Report	Generated at Pulse close. Meeting summary + confirmed gaps + actions + next Pulse date. Client-facing, narrative tone.
Periodic Update	Monthly or quarterly. Net worth movement, SIP performance, goal progress, upcoming actions. Branding with MFD's ARN details.

7.2 Report Content (Pulse Report)

- MFD branding header: name, ARN, firm name, date
- Client name and meeting date / medium
- VaNi-structured meeting summary (confirmed by MFD)
- Key financial snapshot: net worth, protection ratio, goal status — at time of Pulse
- Gaps addressed in this Pulse with status
- Action items: what MFD will do, what client needs to do, with due dates
- Next Pulse date
- Footer: regulatory disclaimer, ARN, SEBI/AMFI registration

7.3 Delivery

- PDF: downloadable from Post Meeting view
- WhatsApp: one-click share via WhatsApp Web / API (formatted summary + PDF attachment)
- Email: send via configured email, PDF attached

Design principle:

The report only includes MFD-confirmed VaNi signals. Raw drafts never reach the client. Quality control is built into the workflow, not bolted on.

8. Acceptance Criteria

8.1 Pulse Setup

1. MFD can configure Pulse for any active contact with frequency, template, and JTD link
2. Frequency options: Monthly (30d), Bimonthly (60d), Quarterly (90d), Custom (n days)
3. JTD appointment is created automatically when JTD toggle is on and setup is saved
4. VaNi prep brief is auto-triggered 48h before the scheduled Pulse date
5. Client reminder is sent 24h before if the toggle is enabled

8.2 Pulse Prep

6. VaNi brief is generated within 60 seconds of trigger
7. Brief includes: snapshot delta, gap analysis, goal probability update, suggested agenda
8. Each VaNi observation has Confirm / Add Context / Ask VaNi / Dismiss controls
9. Confirmed observations are stamped with RC + VaNi + timestamp
10. Dismissed observations are hidden from the brief but archived
11. Agenda items are reorderable and checkable

8.3 In Meeting

12. Timer starts when MFD clicks Start Meeting and runs until End & Summarise
13. Notes auto-save every 30 seconds
14. Actions can be added via type + Enter; each captured action is listed below the input
15. Agenda items can be ticked off during the meeting
16. Meeting can be ended at any time without data loss

8.4 Post Meeting

17. VaNi summary is generated within 90 seconds of meeting end
18. Summary is editable before saving
19. Each action has owner (MFD / client), due date, and status
20. Each original gap has an updated status (In Progress / Addressed / Carried)
21. Next Pulse is auto-scheduled via JTD on Pulse close
22. Pulse report can be generated, downloaded, shared via WhatsApp or email

8.5 Pulse Queue

23. All contacts with Pulse configured appear in the queue
24. Status (overdue / due soon / upcoming / completed) is accurate and real-time
25. Summary strip counts (overdue, due this week, upcoming, YTD completed) are correct
26. Filter pills correctly filter the list by status and frequency
27. Overdue Pulses (> 3 days past due date) are flagged in the MFD dashboard Action Queue

9. Go-to-Market — How We Communicate Pulse

9.1 To MFDs (Customers)

MFDs are the paying customers. They need to understand Pulse as a practice-building tool — not a compliance requirement. The language must be outcome-focused.

Positioning headline for MFDs:

"Never lose a client to silence again. Pulse keeps you present in every client's financial life — with VaNi doing the prep, you doing the conversation."

Key messages

- Pulse = your relationship rhythm. Monthly, bimonthly, or quarterly — set it and never miss a beat.
- Walk in prepared. VaNi reads the client's financial picture before every meeting and tells you what matters.
- Meetings become records. Notes, actions, gaps — everything captured in-session, nothing lost.
- One click to the next meeting. Pulse auto-schedules via your calendar so follow-through is built in.
- Reports that make you look good. Send a branded client update from the meeting in minutes, not hours.

Onboarding nudge (first Pulse)

- At signup or after first contact is added: 'Set up your first Pulse — takes 90 seconds.'
- Dashboard Action Queue surfaces any contacts without a Pulse configured as a prompt
- After 30 days: 'You have 12 contacts without a Pulse. Want VaNi to suggest schedules?'

9.2 To Clients (End Recipients — no app)

Clients do not log into ProessionalKey. They experience Pulse through what their MFD sends them — the Pulse Report. The tone must be warm, clear, and confidence-building.

Positioning for client-facing report:

"Your financial review from [MFD Name] — here's where you stand, what we discussed, and what's next."

What the client receives

- A clean, branded PDF or WhatsApp message after every Pulse meeting
- Written in plain language — no jargon, no fund codes, no percentages without context
- Their action items highlighted clearly — what they need to do, by when
- Their MFD's contact details and next meeting date
- Optional: a one-line net worth / goal progress update (configurable by MFD)

Client onboarding touch (first Pulse)

- Before the first Pulse: client receives a WhatsApp message from MFD saying their first review is scheduled
- After the first Pulse: report is the proof of value — 'This is what working with me looks like'

9.3 Internal Positioning (Vikuna / Sales)

- Pulse is the feature that drives MFD retention — MFDs who use Pulse are less likely to churn because their practice is visibly improving
- Pulse is the gateway to the Report Generator (upsell) and to VaNi Advanced Intelligence (roadmap)
- Pulse completion rate is a proxy for MFD engagement — high Pulse rate = healthy, retained customer
- Pulse history is a regulatory compliance asset — every client interaction is documented

10. Out of Scope — v1.0

- Client self-service portal or app — MFD-only view for now
- Automated WhatsApp / email sending without MFD confirmation
- Multi-MFD Pulse (shared client between two MFDs)
- VaNi fully autonomous brief without MFD confirmation gate
- Video recording of the meeting
- AI transcription of voice notes
- SEBI/AMFI audit-trail export (noted for v2)

V2 Roadmap (noted, not committed):

Periodic Update report (monthly/quarterly without full Pulse) · VaNi sentiment tracking across Pulses · Client portal view of Pulse history · WhatsApp-native report delivery via API

11. Open Questions

Question	Owner / Status
Does JTD support auto-scheduling via API, or is it manual link only?	Tech · Open
What is the VaNi brief generation SLA — is 60 seconds achievable on VPS?	Tech · Open
Should missed Pulses (> 3 days overdue) auto-notify MFD via email / WhatsApp?	Product · Open
What regulatory disclaimers are required on client-facing reports for MFDs?	Legal / Compliance · Open
Should the client receive an opt-in / opt-out for Pulse report delivery?	Legal / DPDP · Open
Is Pulse history accessible to the client on request (DPDP data right)?	Legal · Open
What is the data retention policy for meeting notes (sensitive financial data)?	Legal / Tech · Open

ProessionalKey · Pulse PRD v1.0 · Vikuna Technologies · April 2025

Confidential — Internal Use Only
